

DISCOUNT CHAIN “PCHELKA-MARKET” AUTOMATION

Company: Pchelka-market

Retail store chain
Ukraine, Kiev

Business: retail

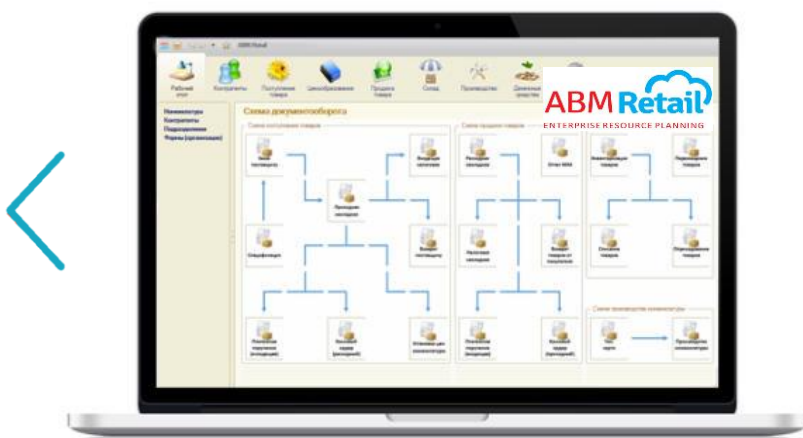

Food products and
household goods sale.

Solution: ABM Retail

Cloud-based system of
quantitative accounting and
store management processes
automation.

The cloud-based retail store management system was successfully implemented and is currently being utilized. The intended purpose of the system is quantitative accounting automation, and key objects and store processes management: assortment, orders, sales, finance, production, relationships with suppliers, pricing, warehouse operations.

By means of friendly and intuitive [ABM Retail](#) system interface, the users carry out all basic store processes.

- commodities delivery from the supplier
- returns execution to the supplier
- movement of goods between stores and warehouses within the chain
- goods write-off
- commodity stocks inventory
- cash flow
- non-cash transactions
- retail sale

To carry out operations of acceptance, movement and inventory, online Portable Data Terminal functionality is used.

ABM Retail Implementation

Chain store executives benefit from the [retail management system](#):

Inventory management and mutual settlements with contractors:

- orders and deliveries management (delivery schedules, order calendar and deliveries for expeditious order formation to the supplier, goods demand is automatically calculated);
- to control prices and assortment of delivery, efficient suppliers' specifications keeping is carried out;
- by means of ABM Retail system the payment calendar is developed, payment documents are formed and unloaded in client bank;
- marketing contracts are kept in ABM Retail system, retrobonuses automatically pay off and a set of documents is formed.

Assortment management:

- active assortment is set in stores;
- registration of minimum stock leftover (reserve stock)

Pricing management:

After ABM Retail system implementation, flexible pricing management mechanism was received:

- individual margin rules for groups of goods and particular goods;
- automatic selling prices calculation;
- control within indicative price and producer's price;
- promotional prices setting.

Own production management: cooking, cafeteria, meat shop, bakery.

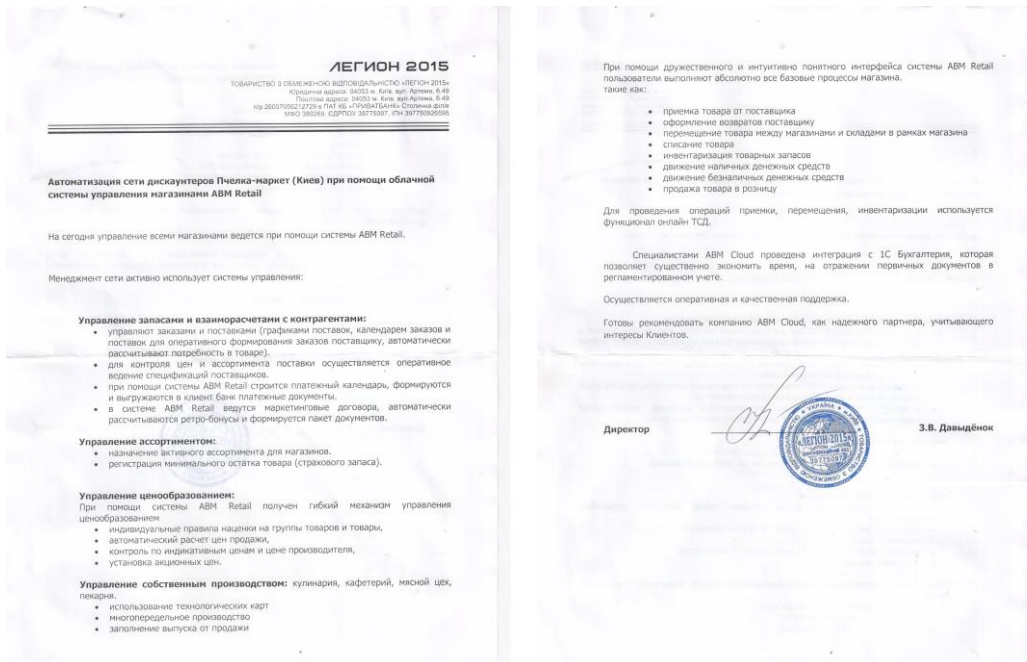

- flow charts usage;
- multiefficient production;
- filling the output from sale.
